

## Telescopic Upright System

### Telescopic Upright System:

- Stores between the Back Panels & extends up to 30" above the Top Rail in 1" increments
- Locking Pin (included with Upright) stores in the top cap when not in use
- Section length must be all 3' or 4', no combination of both in same run
- The load capacity per Telescopic Upright section is 200 lb. per side no matter how many shelves are used on this section. This load capacity is reduced to 60 lb. per Telescopic Upright section if it is used on a Wall Section with Backs installed on only one side.
- Will NOT work with Slotwall or Wiregrid Backs
- When ordering sections specify "T" rail type
- **For pricing see section 100, pg 88**
